

SOLID SURFACES PLACREN®

PLACREN® is a high quality material based composite with 100% acrylic resin, produced by Acren Poland Company. It consists of aluminum hydroxide, acrylic resin, special inserts and pigments.

Aluminum hydroxide makes PLACREN® very solid and durable material, acrylic resin makes it nonporous material.

PLACREN® is produced in sheets, which can be connected into a product with the help of a special glue. In such products the joints are not visible at all, and it seems that the product is like a monolith.

Such surface is more hygienic, as impurity places (like seams and joints) are absent at all.

Unlike natural stone, the damaged surface PLACREN® can be easily restored even at home, and the product will have original look again.

Wide color range and decors offers unlimited possibilities. PLACREN® is the best solution for modern and traditional interiors, such as kitchens, bathrooms, restaurants, offices etc. Due to its great properties, it's also very often used in hospitals and other medical facilities, where hygiene is most important.

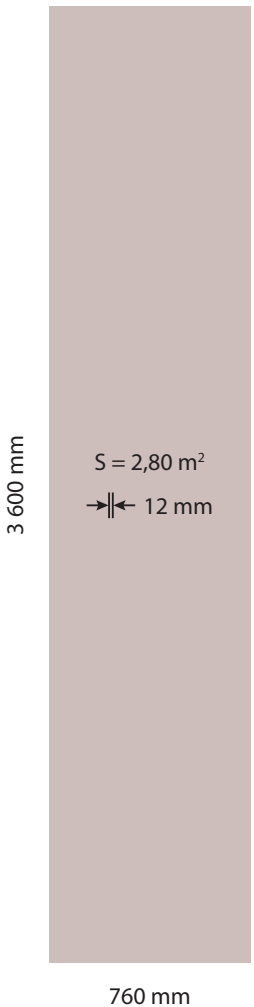

PLACREN® can be thermoformed and seamlessly shaped, allowing to realize ideas in your living space.

Monolith effect, stone look or colorful interior? You can have it all!
